

Pneumatic Breaker Hammer for Demolition

This pneumatic breaker hammer is a powerful tool for heavy-duty demolition and construction. It delivers high impact energy for efficiently breaking concrete, asphalt and other hard materials.

Overview

Heavy-Duty Pneumatic Performance

The Pneumatic Breaker Hammer is a robust and powerful tool engineered specifically for high-intensity demolition and construction tasks. Designed to deliver high impact energy, it excels at breaking through concrete, asphalt, and other resistant materials. Its ergonomic T-handle design minimizes operator fatigue, while high-grade hardened steel components ensure sustained performance in the most demanding site conditions.

Technical Specifications

Key Components

- Hardened steel components
- Heavy-duty piston
- Reliable air valve system

Power Source

Compressed Air

Application

Primary Applications

Roadwork, Building Demolition, General Construction

Features

Design Advantages

Ergonomic T-Handle • High Impact Energy • Durable Construction
