

Pneumatic Cylinder

This pneumatic cylinder converts compressed air into mechanical motion. It is suitable for use in automation, manufacturing, and various industrial applications requiring linear actuation.

Overview

High-Performance Pneumatic Solution

This pneumatic cylinder is engineered for reliable performance in fluid transfer and pressure regulation applications. Designed for seamless integration into larger mechanical systems, it offers consistent flow rates and efficient power handling. Its robust construction ensures durability, making it an ideal choice for demanding industrial environments requiring precise pneumatic control.

Technical Specifications

Rated Pressure

0.08 MPa

Rated Pressure

Flow Rate

15 L/min
