

# Pneumatic Demolition Jackhammer

This pneumatic jackhammer is designed for heavy-duty demolition, construction, and mining applications. It features a robust air-powered mechanism for efficient impact force and ergonomic T-handle grips for comfortable operation.

## Overview

### Heavy-Duty Pneumatic Performance

This pneumatic demolition jackhammer is engineered for rigorous use in construction, mining, and heavy-duty demolition projects. It features a robust air-powered mechanism that delivers consistent, high-impact force to handle demanding materials efficiently. Designed with operator comfort in mind, the tool includes ergonomic T-handle grips and integrated springs to dampen vibration, ensuring durability and extended service life in challenging work environments.

## Technical Specifications

Primary Applications	Demolition, Construction, Mining
Power Source	Pneumatic (Air-powered)
Vibration Dampening	Yes

## Design & Maintenance

### Air Ports

- Integrated air inlet
- Integrated exhaust port

Handle Design	Ergonomic T-handle
Lubrication Monitoring	Integrated clear reservoir
