

Pneumatic Grain Huller

The pneumatic grain huller is a high-performance machine designed for efficient grain hulling. It utilizes pneumatic pressure to gently remove the outer layers of grains, ensuring minimal damage and maximum yield.

Overview

High-Performance Grain Hulling Solution

The pneumatic huller is a professional-grade machine engineered for precise grain processing. It employs an advanced pneumatic pressure system to remove outer layers while protecting the integrity of the grain, resulting in higher yields and reduced waste. Designed for operational versatility, the unit offers adjustable pressure settings to accommodate various grain sizes and types, making it a reliable addition to any grain processing facility.

Performance

Hulling Technology	Pneumatic pressure-based hulling
Key Benefits	Minimal damage, Maximum yield, Adjustable pressure, Consistent performance

Operational Features

Control Interface	Intuitive manual control panel
Maintenance Requirements	Low maintenance design
Physical Design	Compact industrial construction
