

# Pneumatic Hand Brake Control Valve

Pneumatic hand brake valve controls air pressure in braking systems. It features a lever-actuated mechanism for applying and releasing brakes.

## Product Overview

### Pneumatic Hand Brake Control Valve

This pneumatic hand brake control valve is engineered for precise air pressure regulation within heavy-duty braking systems. Featuring a robust metal housing and a user-friendly lever-actuated mechanism, it provides reliable manual control for applying and releasing brakes. The unit is designed with multiple connection ports, ensuring compatibility with standard air line configurations for seamless integration.

## Technical Specifications

Actuation Mechanism	Lever-actuated
Housing Material	Durable Metal
Control Interface	Manual Black Plastic Handle
Key Features	Pneumatic System, Air Pressure Control, Brake Release Mechanism, Multi-port Design
