

Pneumatic Horizontal Drum Winding Machine

This horizontal pneumatic drum winding machine is designed for precise and efficient winding of materials onto drums. It features a robust construction with pneumatic controls for smooth and consistent operation.

Overview

High-Efficiency Drum Winding

This horizontal pneumatic drum winding machine is engineered for precise and efficient material handling in high-volume production environments. It features a robust construction integrated with advanced pneumatic controls to ensure smooth, consistent operation throughout the winding process. Designed for versatility, the system utilizes dual winding drums with adjustable tension settings to accommodate a wide variety of material types and specific winding requirements.

Technical Specifications

Machine Type	Horizontal Pneumatic Drum Winding Machine
Control System	Pneumatic
Number of Winding Drums	2

Features

Key Features

- Robust industrial construction
- Adjustable tension settings
- Dual drum configuration
- Emergency stop mechanisms
- Protective safety guarding

Safety Features	Emergency Stop, Protective Guarding
