

Pneumatic Multi-Core Cable Jacket and Wire Stripping Machine

This machine is designed for processing jacket cables, including multi-core data cables and power cords. It simultaneously strips both the outer jacket and inner core wires.

Overview

Efficient Multi-Core Cable Processing

This pneumatic stripping machine is designed to streamline the processing of multi-core data and power cables. By enabling the simultaneous stripping of the outer jacket and inner core wires, it significantly reduces labor time compared to traditional, multi-step methods. The system is engineered for ease of operation, making it an ideal solution for manufacturing environments, electronics assembly, and wiring harness production.

Technical Specifications

Jacket Stripping Capacity	3 mm
Jacket Stripping Length	90 mm
Core Wire Capacity	8 cores
Core Wire Stripping Length	15 mm

Performance & Features

Stripping Capabilities

- Simultaneous jacket and core wire stripping
- Adjustable stripping length
- Suitable for data cables
- Suitable for power cords

Operation Method	Pneumatic powered, foot pedal control
------------------	---------------------------------------

Certifications & Warranty

Certifications	CE, SGS
Warranty	1 year
