Product Overview

Reliable Pneumatic Connectivity

These pneumatic quick connect fittings are engineered for the instant connection and disconnection of air lines in automated systems. Featuring a robust push-to-connect design, they eliminate the need for specialized tools, ensuring secure and leak-free performance. The assembly includes both high-quality plastic and metal variants, making them versatile for robotics, automation, and general compressed air distribution.

Technical Construction

Design Features

- Push-to-connect mechanism
- Tool-free installation
- Secure collet grip
- Easy-release blue ring

Material Composition

Plastic, Metal, Brass, Stainless Steel

Applications

Common Applications

Automation • Robotics • Compressed Air Systems
