Product Overview

Professional Grade Pneumatic Rock Drill

The YT28 is a high-efficiency pneumatic rock drill engineered for medium-hard to hard rock formations. It features a grouped control mechanism for rapid startup and convenient operation, with an integrated air and water management system. Renowned for its strong flushing capabilities and powerful torque, this tool is an essential instrument for mining, railway construction, and water conservancy projects.

Technical Specifications

Suitable Rock Hardness (f)	8-18
Application Types	Horizontal Blastholes, Inclined Blastholes, Roof Bolting Holes

Compatibility & Support

Recommended Equipment

- FT140(BE) Air-leg
- FT160BC(BD) Air-leg
- FY200B Line Oiler with transparent casing

Mounting Configurations

- Manual Air-leg
- Drill Rig
- Wagon Mount

Key Features

Operational Advantages

1 High

Efficiency

1 Powerful

Torque

1 Easy
