

Pneumatic Standard Cylinder

This standard pneumatic cylinder is designed for industrial automation applications. It is suitable for linear motion, pushing, pulling, lifting, and positioning tasks in automated machinery and equipment.

Product Overview

About the T/X Series Cylinder

The T/X series standard cylinder is a high-performance pneumatic component engineered for a wide array of industrial automation applications. It features a robust aluminum body and precision-machined internal components to ensure reliable, smooth operation under demanding conditions. This versatile cylinder is an ideal choice for tasks involving linear motion, such as pushing, pulling, lifting, and positioning within automated machinery.

Technical Specifications

Body Material	Aluminum
Series	T/X

Features

Mounting Options	Versatile Mounting
------------------	--------------------

Applications

Core Applications

- Linear motion
- Pushing
- Pulling
- Lifting
- Positioning
