

Pneumatic System Components

These components are designed for use in pneumatic systems. They are suitable for various industrial applications, including automation, robotics, and manufacturing.

Product Overview

Industrial Pneumatic Components

This collection of pneumatic system components is designed for high-performance industrial applications, including automation, robotics, and manufacturing. The set features durable steel construction, ensuring reliability in demanding environments. These precision-engineered parts are essential for maintaining efficient pneumatic operations.

Technical Specifications

Material

Steel

Included Components

- Bearing housings
- Plain bearings
- Ball bearings

Part Number

113-L1-622

Application Areas

Suitable Industries

Automation, Robotics, Manufacturing
