

Pneumatic System Valve

This pneumatic component is designed for use in industrial machinery and pneumatic systems. Its design ensures reliable performance and precise control of air flow within the system.

Product Overview

Industrial Pneumatic Control

This pneumatic system valve is engineered for demanding industrial applications, providing precise air flow control and reliable performance. Featuring a robust construction with a distinct metallic and blue finish, it is designed to integrate seamlessly into existing pneumatic circuits. Its threaded connections ensure a secure and straightforward installation for maintenance and system upgrades.

Technical Details

Finish

Metallic • Blue

Design Type

Valve/Regulator

Connection Type

Threaded

Application

Industrial Machinery, Pneumatic Systems
