

Pneumatic Tire Roller Compactor

This tire roller is a heavy-duty compaction machine designed for asphalt and soil applications. It utilizes a pneumatic tire system to provide uniform pressure distribution for smooth and dense surfaces.

Overview

High-Performance Compaction

The XG6262P pneumatic tire roller is a professional-grade machine engineered for asphalt and soil compaction in large-scale infrastructure projects. It features an advanced hydrostatic transmission and adjustable tire pressure system, ensuring uniform surface density and superior finish quality. Designed for durability and operator comfort, this unit includes a built-in water spray system to prevent material adhesion during operation.

Technical Specifications

Model Identifier	XG6262P
------------------	---------

Key Features

Featured Capabilities	Hydrostatic Transmission, Pressurized Water Spraying, Adjustable Tire Pressure, Heavy-Duty Frame
-----------------------	--------------------------------------------------------------------------------------------------

Application

Suitable Applications

- Asphalt Compaction
- Soil Stabilization
- Road Construction
- Airport Runway Construction
