

Pneumatic Tool Gear

This metallic gear is designed for use in pneumatic tools. It features a toothed outer rim and a series of square cutouts around the central hub.

Product Overview

Precision Pneumatic Gear

This high-precision metallic gear is engineered specifically for pneumatic tool assemblies and mechanical systems. It features a robust toothed outer rim and a specialized concentric design, ensuring reliable power transmission. The component includes a central keyway for secure shaft mounting and square cutouts around the hub for integrated system compatibility.

Design & Construction

Component Category

Mechanical Gear • Pneumatic Tool Component

Material

Metallic

Key Features

Toothed outer rim, Concentric design, Precision machined

Technical Specifications

Mounting & Interface

- Central keyway for shaft mounting
- Square cutouts around central hub
