

Pneumatic Y-Strainer

This industrial Y-strainer is designed for pneumatic systems. It filters debris and contaminants from air lines to ensure optimal performance.

Product Overview

Industrial Pneumatic Y-Strainer

This industrial-grade Y-strainer is specifically engineered for pneumatic systems to ensure the integrity of downstream equipment. By effectively filtering out debris and contaminants from air lines, it helps maintain optimal system performance and extends the service life of sensitive components. Its robust design is built to withstand high-pressure applications, while the Y-pattern configuration facilitates efficient filtration and straightforward maintenance.

Technical Specifications

Connection Type	Flanged
Design Pattern	Y-Pattern
Filtration Factor	10 X

Features & Maintenance

Maintenance Features

- Removable screen for easy cleaning
- Simplified screen replacement
- Secure flanged connections
- Leak-proof installation

Application Suitability	High-Pressure Systems, Pneumatic Air Lines, Industrial Filtration
