

Pneumatically Actuated Butterfly Valve

This industrial butterfly valve is designed for pneumatic actuation. It is suitable for controlling the flow of fluids or gases in various industrial applications.

Overview

Industrial Pneumatic Butterfly Valve

This industrial butterfly valve is engineered for reliable pneumatic actuation, providing precise flow control for both fluids and gases. Featuring a robust body design and a central disc mechanism, it ensures consistent performance in demanding industrial environments. The integrated pneumatic actuator allows for seamless remote operation, while the resilient seat construction guarantees a tight shutoff to prevent leakage.

Technical Specifications

Sealing

Resilient Seat • Tight Shutoff

Valve Type

Butterfly Valve

Actuation Method

Pneumatic

Suitable Media

Fluids, Gases

Design Features

Design & Construction

- Robust body construction
- Mounting flanges included
- Central disc flow control
- Automated pneumatic actuator
