

Polycrystalline 60-Cell Solar Panel

This high-efficiency polycrystalline solar panel is designed for both residential and commercial applications. The 60-cell module provides reliable power output and exceptional durability.

Product Overview

High-Efficiency 60-Cell Polycrystalline Solution

This 60-cell polycrystalline solar panel is engineered for exceptional reliability and high-efficiency energy conversion in both residential and commercial projects. Featuring a robust frame and high-transparency glass, it is designed to withstand harsh environmental conditions while maintaining consistent power output. Whether for grid-tied or off-grid installations, this durable module provides an optimal balance of performance and long-term energy yield.

Key Features

Technical Highlights

- 60-cell polycrystalline architecture
- High-transparency protective glass
- Robust, weather-resistant frame
- Optimized for sunlight absorption
- Suitable for on-grid and off-grid use

Performance Metrics

Cell Configuration	60 cells
--------------------	----------

Applications

Deployment Scenarios	Residential, Commercial, Industrial, Grid-tied, Off-grid
----------------------	--
