

Polycrystalline Silicon Solar Cell Module

This high-efficiency polycrystalline silicon solar cell module is designed for renewable energy applications. It converts sunlight into electricity, offering optimal performance and durability for reliable and sustainable energy.

Overview

High-Efficiency Solar Module

This polycrystalline silicon solar cell module is engineered for optimal performance and durability in renewable energy applications. Designed to convert sunlight into electricity efficiently, it provides a reliable and sustainable energy source for various environments. The module is suitable for a wide range of installations, including residential, commercial, and industrial solar power systems.

Technical Specifications

Environmental Durability

Weather Resistant • Durable

Cell Technology

Polycrystalline Silicon

Ideal Applications

Residential, Commercial, Industrial
