

Polyurethane Foam Spraying Machine

This high-pressure machine is designed for polyurethane foam spraying applications. It features a self-cleaning filter system and is mounted on a wheeled platform for mobility.

Product Overview

Professional Polyurethane Foam Spraying Machine

This high-performance polyurethane foam spraying machine is engineered for efficiency in insulation, coating, and casting applications. It features an advanced pneumatic supercharging device combined with a robust 380V heating system to ensure rapid material preparation and consistent operational stability. Designed for user safety and ease of use, the unit includes comprehensive leakage protection, emergency stop functionality, and an intuitive control panel.

Technical Specifications

Heating System Power

380 V

Voltage

Key Machine Features

- Pneumatic supercharging device
- Digital material consumption counting system
- Multi-leakage protection safety system
- High-viscosity capable lifting pump
- Emergency shutdown switch

Applications

Insulation & Coating Uses

External wall insulation, Roofing, Cold storage, Ship cabins, Refrigerated trucks, Tank insulation

Casting & Production Uses

Solar water heaters, Security doors, Refrigerators, Pipe insulation, Packaging, Road construction

Design Highlights

Operator Benefits

Lightweight • Simple operation • Low failure rate • Easy maintenance • Humanized interface
