

POM PA Plastic Bearing with Glass Balls

This plastic bearing features POM inner and outer rings with a PA retainer. Glass balls ensure smooth operation in applications requiring corrosion resistance.

Overview

High-Performance Plastic Bearings

These high-precision POM/PA plastic bearings are engineered for applications requiring low friction and superior corrosion resistance. Designed to outperform traditional metal bearings in challenging environments, they feature a robust plastic cage and precision-ground glass balls for reliable operation. They are an ideal solution for specialized industries including food processing, medical device manufacturing, and chemical handling systems.

Technical Specifications

Key Features

- Low-friction operation
- Corrosion-resistant construction
- Precision-ground balls
- Robust plastic cage

Material Composition

POM, PA, Glass Balls

Applications

Recommended Industries

Food Processing • Medical Devices • Chemical Handling
