

Pond Water Circulation Pump for Waterfalls and Fountains

This pond pump is engineered for reliable water circulation in ponds and water features. Its robust design ensures durability, even in demanding outdoor environments, and is suitable for filtration systems, waterfalls, and fountains.

Product Overview

High-Performance Pond Circulation

The FP-B pond pump is engineered for reliable and efficient water circulation in ponds and water features. Its robust design ensures durability and longevity, even in demanding outdoor environments. Equipped with a high-performance motor, it delivers optimal flow rates while minimizing energy consumption, making it suitable for filtration systems, waterfalls, and fountains.

Technical Specifications

Safety Features	Yes
Material Composition	Corrosion-resistant materials
Compliance	European Standards

Usage & Maintenance

Suitable Applications

- Filtration systems
- Waterfalls
- Fountains
- General water circulation

Design Highlights

Compact Size • Easy Maintenance • Thermal Overload Protection
