

Portable 200A Welding Machine

This portable welding machine is designed for various welding processes. It features adjustable settings for amperage and voltage, thermal overload protection, and compatibility with different welding rods.

Product Overview

Professional Versatility

This portable 200A welding machine is engineered for high-performance welding across a wide range of applications. Featuring adjustable amperage and voltage settings, it provides users with precise control for professional results on steel, stainless steel, and cast iron. Equipped with thermal overload protection and a durable 60% duty cycle, this unit is designed to meet the rigorous demands of both workshop and field environments.

Technical Specifications

Output Current Range

200 A Maximum Output	20 A Minimum Output
--------------------------------	-------------------------------

Input Voltage: 220V

Duty Cycle: 60 %

Capabilities

Compatible Materials: Steel, Stainless Steel, Cast Iron

Features

Integrated Safety

- Thermal overload protection
- Adjustable amperage control
- Adjustable voltage control

Design

Portable • Professional Grade
