

Portable Column Array Bluetooth Speaker System

This portable Bluetooth speaker system features a column array design. The system consists of a subwoofer base unit and a detachable vertical array speaker, offering both wireless Bluetooth connectivity and wired input options.

Overview

Versatile Portable Audio Solution

This Portable Column Array Bluetooth Speaker System is designed for professional audio reinforcement in a variety of settings. It features a unique detachable vertical array for wide sound dispersion paired with a powerful 8-inch subwoofer for deep bass response. With integrated Bluetooth functionality for hands-free calls and music playback, it offers a flexible and high-quality solution for presentations and events.
