

Portable Conveyor Belt Vulcanizing Press for Belts Up to 650mm

This portable vulcanizing press is designed for splicing and repairing conveyor belts. It provides uniform temperature and pressure for effective vulcanization, ensuring strong and durable splices.

Overview

Professional Vulcanizing Solution

This portable conveyor belt vulcanizing press is engineered for high-precision splicing and repair of conveyor belts up to 650mm wide. Utilizing advanced digital control systems and high-strength aluminum alloy heating plates, it delivers uniform temperature and pressure distribution across the splicing area. Its lightweight, modular design ensures reliable on-site operation for industries including mining, power generation, and food processing.

Technical Specifications

Max Belt Width	650 mm
Temperature Range	0 - 300 °C
Temperature Uniformity	± 2 °C
Vulcanizing Pressure	2.5 MPa
Heating Time	Max 25 minutes to target temp
Cooling Time	15 minutes (145°C to 70°C)
Available Voltages	220V, 380V, 415V, 660V

Key Features

Quality Standards

CE • ISO 9001:2008

Primary Applications

- Mining
- Metallurgy
- Power Plants
- Port/Dock
- Cement & Construction
- Chemical Industry
- Tobacco
- Food Processing
