

Portable DC Inverter Arc MMA Welder

This portable DC inverter arc MMA welder is designed for MMA (Manual Metal Arc) welding processes. It features an adjustable amperage range, typically from 30A to 200A, allowing for versatile welding on various metal thicknesses.

Overview

Professional Arc Welding Performance

This portable DC inverter arc welder is engineered for versatility and safety in manual metal arc (MMA) welding applications. Utilizing advanced IGBT technology, the unit provides stable power output and efficient performance for various metal thicknesses. Integrated features like a voltage reduction device (VRD), easy arc ignition, and thermal protection ensure a reliable and safe user experience for professional environments.

Technical Specifications

Current Range

30 A Min Current	200 A Max Current
----------------------------	-----------------------------

Welding Technology	MMA, IGBT, DC Inverter
---------------------------	------------------------

Input Power	1-Phase
--------------------	---------

Safety & Control

Safety Features

VRD (Voltage Reduction Device) • Temperature Protection • Easy Start Arc Ignition

Control Interface

- Adjustable current intensity control
- Integrated digital welding current meter
