

Portable DC Welding Generator 2000W

This mini-type generator delivers direct current electricity with a 2000W output. It is designed for direct current welding applications.

Product Overview

Compact Welding Power

The FHC series mini type permanent-magnet DC welding generator is a compact and efficient solution designed for versatile welding applications. Its permanent magnet design ensures consistent power delivery, providing a stable DC output suitable for both professional and DIY projects. Engineered for portability, this generator is an ideal choice for on-site welding tasks and remote locations where reliability is essential.

Generator Technology

Permanent-magnet D.C welding generator

Features & Safety

Ideal Applications

- On-site welding
- Remote location projects
- Professional welding tasks
- DIY welding projects

Integrated Safety

Fuse Protection, Voltmeter Monitoring
