

Portable Digital Inclinometer

This portable digital inclinometer utilizes a high-precision gravity accelerator and 3D magnetic resistance sensor for accurate measurements. Modern digital data processing techniques ensure high sensitivity and good repeatability in a small volume.

Product Overview

Precision Inclination Measurement

This portable digital inclinometer is designed for reliable inclination measurement and direction control in engineering, exploration, and directional drilling applications. It integrates a sensor, power supply, and data processing unit into a compact system that operates without cables or mechanical moving parts. The device independently determines dip and azimuth angles, making it an essential tool for hydrology, oil field, coal field, and geological projects.

Measurement Performance

Dip Angle Accuracy

0.2 °

Dip Angle Error

Measurement Specifications

Parameter	Range	Error
Dip Angle	0–50°	±0.2°
Azimuth Angle (1–3° Dip)	0–360°	±5.0°
Azimuth Angle (3–50° Dip)	0–360°	±3.0°

Technical Details

Operational Limits

- Maximum measurement depth: 1500 m
- Measurement mode: Fixed points
- Delay time: 1–180 min
- Time interval between points: 1–60 min
- Operating temperature: 0°C to 55°C

Probe Dimensions

40mm diameter x 1320mm length

Data & Power

Data Storage Capacity

100 groups

Battery Runtime

32 hours

Total Measurement Points Saved

1000 points

Applications

Suitable Industries

Engineering, Hydrology, Oil Field, Coal Field, Geology
