

Portable Gasoline Water Pump

This portable pump is a self-priming unit well-suited for diverse water transfer needs. Its gasoline engine allows independent operation without reliance on electricity.

Product Overview

High-Efficiency Gasoline Water Pump

This portable, self-priming water pump is engineered for reliable performance in diverse environments without the need for an external electrical power source. Featuring a rugged metal housing and a protective frame, it is designed for ease of transport and long-term durability in challenging conditions. The unit is an ideal solution for rapid water transfer in agriculture, construction site drainage, and general utility applications.

Key Features

Operational Highlights

- Self-priming capability
- Portable design with frame
- Independent gasoline power
- Durable metal housing

Target Applications

Irrigation, Drainage, Construction, Water Transfer

Model Identification

Model Number

HS-DGZ80
