

Portable Gasoline Water Pump with Wheel and Handle

This portable water pump is powered by a gasoline engine. It includes a durable wheel and handle for easy transportation.

Product Overview

High-Efficiency Water Management

This portable gasoline water pump is designed to provide reliable performance for diverse liquid transfer needs. Featuring a robust chassis equipped with wheels and a handle, it offers excellent mobility for field work or emergency drainage. The gasoline-powered engine ensures high output in locations where electrical access is unavailable, making it an ideal choice for irrigation and general industrial water management.
