

Portable IGBT Metal Cutter

This portable cutting machine is designed for various metal cutting applications. It features adjustable current control, thermal overload protection and a durable construction for reliable performance.

Overview

Portable IGBT Metal Cutter

This portable metal cutting machine is engineered for high-performance cutting applications, utilizing advanced IGBT technology for reliability. It features precise adjustable current control and integrated thermal overload protection to ensure safe and consistent operation. Designed for durability, it is a versatile tool suitable for both professional workshop environments and demanding DIY projects.

Technical Specifications

Technology

IGBT

Model Number

LGK-40N

Key Features

Performance Metrics

40 A

Rated Cutting Current

Usability

- Portable design
- Adjustable current control
- Durable construction

Safety & Protection

Thermal Overload Protection
