

Portable Kerosene Space Heater

This portable heater is designed for indoor use. It is fueled by kerosene or a similar liquid fuel, providing radiant heat.

Overview

Portable Kerosene Space Heater

This portable space heater is designed for efficient supplemental heating in small to medium-sized indoor spaces. Featuring a robust cylindrical design with a protective metal cage, it ensures safety while providing consistent radiant heat. The unit is fueled by kerosene, making it a reliable solution for warming areas where electric heating may not be practical or available.

Design & Safety

Safety Components

- Protective metal cage
- Transparent glass enclosure

Design Features

Portable, Cylindrical Shape, Radiant Heating

Usage

Recommended Application

Indoor supplemental heating for small to medium-sized rooms
