

Portable Mobile Belt Conveyor for Grain Handling

This portable belt conveyor is designed for efficient grain handling. Its mobile design allows for easy relocation within food and beverage processing facilities.

Product Overview

Efficient Material Handling Solution

This portable mobile belt conveyor is engineered for reliable material handling across various industrial sectors, including grain processing and bulk material transport. Its modular, robust design ensures operational stability, while integrated mobility features allow for easy relocation to suit dynamic production environments. Built to meet international quality standards, this system provides a safe, continuous, and highly adaptable solution for your logistics and supply chain needs.

Technical Specifications

A robust and versatile belt conveyor machine designed for efficient material handling in various industrial applications.

The conveyor features adjustable height settings and a high-performance motor for continuous operation.

This system incorporates robust metal rollers and a durable frame, ensuring reliable performance in industrial environments.

Certified with ISO 9001:2000 quality management system, ensuring reliability and performance.

Certifications

ISO 9001:2000 • ISO Certified

Key Operational Features

- Adjustable height settings
- Variable speed control
- Integrated infeed hopper
- Emergency stop buttons
- Protective safety guards

Construction Materials

Robust steel frame with high-durability conveyor belt

Mobility Features

Mobile, Wheeled Base, Portable Design

Applications

Designed for efficient and reliable material handling, this unit is suitable for grains, powders, and small parts.

Suitable Applications

Grain Handling, Food Processing, Bulk Material Transport, Stone Crusher Lines, Industrial Logistics
