

Portable Solar Power Generation System

This complete solar power generation system is designed for small-scale electricity needs. It includes a solar panel, power control box, and connection cables to power small appliances and lighting, suitable for off-grid applications or emergency backup.

Product Overview

Portable Solar Power Generation System

The LB-P60 Series is a comprehensive solar power generation solution engineered for small-scale electricity requirements. This portable system features a high-efficiency solar panel, a dedicated power control box with integrated voltmeter and charging indicators, and essential connection cables. Designed for versatility, it provides reliable off-grid power for small appliances and lighting, making it an excellent choice for remote locations, camping, or emergency backup scenarios.

Technical Features

Included Components

- Solar Panel
- Power Control Box
- Connection Cables

Control Box Capabilities

Built-in Voltmeter, Charging Indicators, Load Regulation

Applications

Suitable Applications

Off-grid Power • Camping • Emergency Backup • Remote Locations
