

Portable Water Transfer Pump

This is a portable water pump designed for various applications such as irrigation, drainage, and general water transfer. The unit is compact and designed for easy transportation and setup in diverse environments.

Overview

Versatile Portable Water Transfer Solution

This portable water transfer pump is engineered for demanding tasks including agricultural irrigation, site drainage, and general water management. Its compact design features a robust, protective frame that ensures durability and ease of transportation in diverse field environments. Equipped with a reliable engine and a high-strength metal pump housing, this unit is built to withstand rigorous use while maintaining operational efficiency.

Technical Specifications

Engine Power Rating

4 HP

Engine Power

Model ID

STP20

Design Features

Portable, Compact, Robust Frame, Metal Housing

Applications

Typical Applications

- Agricultural irrigation
- Site drainage
- General water transfer
