

Positive Displacement Fuel Transfer Pump

This positive displacement pump is designed for fuel transfer applications. It features a durable metallic housing, pulley system, and threaded ports for fluid connections.

Product Overview

Robust Fluid Transfer Solution

This positive displacement fuel transfer pump is engineered for high-performance gasoline and gas applications. Featuring a durable metallic housing and an integrated pulley system, it is built to withstand demanding industrial environments. The design prioritizes efficient fluid transfer and ease of maintenance, making it a reliable choice for professional fuel handling systems.

Technical Specifications

Pump Mechanism	Positive Displacement
Compatible Fluids	Gasoline, Gas
Housing Material	Metallic

Design Features

Power Transmission	Pulley System
Maintenance Access	Yes
Port Configuration	Threaded Inlet/Outlet
