

Positive Displacement Piston Pump

This positive displacement pump is designed for heavy-duty industrial applications. It uses an electric motor coupled to a gearbox to drive the pumping mechanism within its cylindrical housing.

Overview

Industrial High-Pressure Performance

This positive displacement piston pump is engineered for demanding industrial environments requiring consistent, high-pressure fluid transfer. Featuring a robust design with an integrated electric motor and gearbox assembly, it ensures reliable operation under heavy-duty conditions. The unit is mounted on a durable base, providing stability and vibration resistance for long-term service life.

Technical Specifications

Pump Type	Positive Displacement Piston Pump
Application Suitability	High-Pressure, Heavy-Duty Industrial

Design & Construction

Construction Details

- Integrated electric motor
- Coupled gearbox drive system
- Sturdy industrial base
- Cylindrical housing design

Finish

Blue • Red
