

Potato Harvesting Machine

This potato harvester attaches to a tractor for efficient potato harvesting. It lifts potatoes from the soil, separates them from dirt and stones, and deposits them in rows.

Overview

Efficient Potato Harvesting Solution

This professional-grade potato harvesting machine is engineered for medium to large-scale farming operations. Designed to attach seamlessly to a tractor, it efficiently lifts potatoes from the soil while simultaneously separating dirt and stones. Its robust construction and adjustable features ensure reliable performance even in demanding field conditions.

Technical Features

Key Mechanisms

- Adjustable digging depth
- Vibrating sieves for soil separation
- Tractor-mounted design
- Row-based deposit system

Operational Capabilities

Build Quality

Robust Construction • Field-Ready

Ideal Use Cases

Medium-scale farms, Large-scale farms, Commercial agriculture
