Product Overview

Advanced Potato Planting Technology

The 2CM-2 series potato planter integrates advanced international technology to streamline large-scale agricultural operations. Designed to be compatible with standard four-wheel tractors, this machine automates the critical steps of ditching, manuring, sowing, and soil casing in a single pass. Its robust construction ensures high efficiency and uniform planting, significantly reducing labor requirements while optimizing crop spacing for better yields.

Technical Specifications

Model Series	2CM-2
Tractor Compatibility	Four-wheel tractor

Operational Capabilities

Key Operational Benefits

- Simultaneous multi-stage operation
- Consistent planting depth and interval
- Uniform seed spacing for optimal growth
- Reduced labor costs

Integrated Functions	Ditching, Manuring, Sowing, Casing Soil
----------------------	-----------------------------------------

Construction

Build Quality

Robust Frame • Durable Components • Field-Ready
