

Powder Actuated Tool Drive Pin

This hardened steel drive pin is designed for use in powder actuated tools. Features include a pointed tip for penetration, a ribbed shank for secure fastening, and a plastic or coated head for easy identification and compatibility with specific tools and applications.

Product Overview

High-Performance Drive Pin

This hardened steel drive pin is engineered for high-impact fastening applications using powder actuated tools. Designed for reliability, it features a pointed tip for optimal penetration and a ribbed shank to ensure a secure grip in challenging substrates. It is an essential component for professional construction and fastening tasks requiring durability and precision.

Technical Specifications

Key Features

- Pointed tip for enhanced penetration
- Ribbed shank for secure fastening
- Coated head for tool compatibility

Compatibility

Powder Actuated Tools

Material

Hardened Steel

Compatible Surfaces

Concrete, Steel, Hard Materials
