

Powder Material Transport Tanker

This tanker truck is designed for transporting low-density powder materials. The robust chassis and specialized tank ensure material integrity during transit.

Overview

Advanced Concrete Mixing Transport

This new generation of concrete mixing transporter leverages advanced military-derived technology to enhance construction efficiency and capacity. Featuring a specialized mixing cylinder design, the unit offers a 10% increase in loading capacity and optimized discharge speeds. The engineering focus on high-strength, wear-resistant materials and a lower center of gravity ensures superior safety, reduced operating costs, and improved fuel efficiency for professional concrete transport operations.

Weight Reduction

Technical Specifications

Compatible Chassis Brands

- Dongfeng
- Shaanxi Automobile
- Sinotruck
- Beiben

Available Tank Capacities

4m³, 5m³, 6m³, 8m³, 10m³, 12m³, 14m³

Design Features

Engineering Highlights

Feature	Benefit
Sub-frame removal	Lower center of gravity by 103mm for safety
Wear-resistant strip	Increased blade life
High-strength steel	Improved durability and weight reduction
