

Power Generation Project Services

Comprehensive services are provided for electricity generation projects. These services include planning, construction, and equipment installation for power plant infrastructure.

Project Overview

Comprehensive Power Infrastructure Solutions

Our power generation project services cover the full lifecycle of infrastructure development, from initial site construction to complex equipment installation. We specialize in large-scale energy projects, including hydroelectric and civil engineering works, ensuring professional execution at every stage. Our teams manage the intricate logistics of lowering heavy machinery and coordinating on-site construction to deliver reliable power generation capabilities.

Project Capabilities

Scope of Services

- Power plant construction
- Hydroelectric infrastructure development
- Civil engineering for energy sites
- Heavy equipment installation
- Generator rotor assembly and placement

Project Types

Hydroelectric, Civil Engineering, Power Generation, Infrastructure

Technical Execution

Installation Highlights

1 Phase

Heavy Equipment Handling

1 Phase

Site Construction
