

Power Plant Construction and Installation

Construction and installation services for power plants. This includes the erection of main buildings, auxiliary structures, and the integration of equipment.

Project Overview

Power Plant Construction and Installation Services

This service offering focuses on the professional construction and installation of power plant infrastructure. We utilize advanced materials, such as steel coal hoppers with optional ceramic plate linings, to ensure long-term durability and operational efficiency. Our approach prioritizes abrasion resistance and streamlined on-site assembly using specialized bonding techniques.

Technical Specifications

Lining Options

- Standard Steel
- Ceramic Plate Lining

Key Material Features

Abrasion Resistant, High Hardness, Steel Construction

Installation Details

Installation Method

Factory-prefabricated components with on-site assembly using special adhesive bonding

Installation Efficiency

Yes
