

# Power Plant Construction Services for 2 x 300MW Unit

Construction services are available for a 2 x 300MW power plant unit. These services include the installation of the unit.

## Project Overview

### Power Plant Construction Services

This construction service focuses on the development of a 2 x 300MW unit power plant facility. The project emphasizes the use of advanced, durable materials for critical infrastructure components. By utilizing steel coal hoppers with optional ceramic plate linings, the construction ensures high abrasion resistance and long-term operational reliability.

## Technical Specifications

### Unit Capacity

**300 MW**

Capacity per Unit

**2 units**

Number of Units

### Key Material Benefits

- High hardness
- Superior abrasion resistance
- Easy factory-based installation
- Specialized adhesive bonding

### Material Composition

Steel, Ceramic Plate Lining
