

Power Plant Engineering Services

These services encompass the design, construction, and optimization of power generation facilities. They ensure efficient and reliable energy production while adhering to environmental standards.

Service Overview

Industrial Power Engineering Expertise

This service provides comprehensive industrial engineering solutions specializing in large-scale power plant infrastructure. With a proven track record since 1993, the engineering team delivers complex projects ranging from power generation facilities to specialized storage infrastructure. The service is recognized globally for its high-level project management and adherence to international quality standards.

Certifications & Recognition

Industry Standing

ENR Top 225 Global Contractor

Quality & Standards

ISO 9001:2000, AAA Credit Rating

Project Experience

Notable International Projects

- Burma Economic Power Project
- Mongolia Power Station
- Vietnam Power Plant
- Thailand Cave BNS Steel
- Pakistan Liquefied Gas Storage Tank

Total Projects Completed

600 +

Completed Projects
