

Power Plant Equipment for 4x60 Capacity

This large-scale industrial machinery is designed for power generation and processing. It supports a power plant capacity of 4x60, indicating significant power output capabilities.

Project Overview

Industrial Power Generation Capability

This specialized power plant equipment is engineered for large-scale energy production infrastructure. Designed to support high-capacity operations, it provides reliable performance in complex industrial environments. The system exemplifies advanced engineering standards in power generation, ensuring efficient integration into significant energy projects.

Technical Metrics

Capacity Configuration

4 units

Unit Count

60 MW
