

Power Plant with 2x60 Capacity

The power plant is engineered for electricity generation. It features a capacity of 2x60, suitable for large-scale energy demands.

Project Overview

High-Capacity Power Generation Facility

This power generation project features a robust 2x60 capacity configuration, engineered for reliable utility-scale performance. Designed for high efficiency, it reflects advanced standards in large-scale electrical power infrastructure. The system is built to support significant regional energy demands through professional engineering and design consultation.

Technical Specifications

Performance Metrics

120 60x2

Total Unit Capacity

Capacity Configuration	2x60
Project Type	Power Generation, Infrastructure, Engineering Contracting
