

PP Film Blowing Machine for LDPE and HDPE

This machine is used for blowing polypropylene (PP) film. It can also blow high-density polyethylene (LDPE, HDPE) and is widely used in food, clothing, textiles, commodities, and industrial products packaging.

Product Overview

Professional Film Blowing Solution

This high-performance film blowing machine is expertly engineered for the production of LDPE and HDPE plastic films. Featuring a precision-machined alloy steel screw and barrel, it delivers superior hardness and corrosion resistance for demanding industrial environments. The system utilizes an under-blowing method and includes a torque-controlled coiling unit to ensure consistent tension and neatly wound film rolls.

Technical Construction

Material Specifications	High quality alloy steel, Nitrided surface, Precision machined
Extruder Height	3 meters

Operational Features

Compatible Materials LDPE • HDPE	
Blowing Method	Under-blowing
Winding Mechanism	Torque motor tension control
