

Pre-Insulated Aluminum Connector for Electrical Wiring

Pre-insulated aluminum connectors ensure secure connections for aluminum conductors. The insulation protects against environmental factors and enhances safety in electrical applications.

Product Overview

Professional LV-ABC Connector

The MJPTN pre-insulated connectors are specialized components engineered for LV-ABC systems featuring a neutral messenger. Specifically designed for the neutral conductor, these connectors provide a secure and reliable connection point for electrical power transmission and distribution. The pre-insulated design offers essential protection against harsh environmental factors while enhancing overall safety for overhead lines and substation infrastructure.

Technical Details

Insulation Benefits

- Pre-installed insulation
- Environmental protection
- Enhanced operational safety

Connector Type	Pre-insulated Aluminum Connector
Primary Application	LV-ABC Systems, Neutral Messenger, Overhead Lines, Electrical Substations
Construction Material	Aluminum
