

Precision Automotive Chassis Component

This is a precision-machined component for automotive chassis and suspension systems. The metal part is coated for corrosion resistance and provides structural support.

Product Overview

Precision Automotive Chassis Component

This precision-machined component is designed for high-performance automotive applications, specifically within chassis and structural support systems. Engineered with complex geometry and multiple structural bends, it ensures durability and precise fitment. The component features a specialized corrosion-resistant finish, making it suitable for demanding environments.

Manufacturing Capabilities

Production Equipment

- Laser Cutting Machines
- Flame Cutting Machines
- Bending Machines (8T, 80T, 150T)
- Punching Machines (35T, 45T)
- Welding Robots
- Hydraulic Press (200A)
- Milling Machines
- Shear Machines

Processing Methods

Sheet Metal Processing, Laser Cutting, Flame Cutting, Plasma Cutting, Mechanical Processing, Riveting, Welding

Key Metrics

Production Facility Scale

6500 sqm

Facility Area

4 million USD

Annual Output Value

Applications

Industry Applications

Automotive • Forklift Accessories • Air Conditioning Components • Elevator Parts
