

Precision CNC Machined Metal Parts

These precision-engineered mechanical parts are manufactured using CNC machining services. The OEM components are designed for various machinery and industrial applications, ensuring high accuracy and durability.

Overview

High-Precision OEM CNC Machining Services

Providing comprehensive metal processing solutions including laser cutting, CNC machining, and specialized welding for diverse industrial applications. Our facilities handle everything from sheet metal parts to complex mechanical components with high accuracy and durability. We serve a wide range of sectors including automotive, HVAC, and material handling equipment, ensuring components meet rigorous professional standards.

Capabilities

Core Processing Capabilities

Sheet Metal Processing, Laser Cutting, Flame Cutting, Plasma Cutting, Mechanical Processing, Riveting Welding, CNC Machining

Manufacturing Equipment

Advanced Production Machinery

- Laser Cutting Machines
- Flame Cutting Machines
- Bending Machines (8T, 80T, and 150T)
- Punching Machines (35T and 45T)
- Welding Robots
- Hydraulic Press (200A)
- 4ASS Milling Machine
- Shear Machine

Applications

Target Industries

Auto Parts • Forklift Accessories • Air Conditioning Accessories • Elevator Parts • Industrial Machinery

Production Scale

Manufacturing Capacity

6500 sqm

Facility Area

4 M USD

Annual Output Value

Technical Details

Component Features

- High accuracy and precision engineering
- Complex geometries supported
- Durable construction for industrial use
- OEM custom manufacturing
